EPA line vs. the market

The EPA line is what the ratings alone say about each game. A big gap is not a bet: more often the market knows something the ratings can't see, such as a quarterback injury or the weather. Treat it as a game to look into.

GAME	DAY	EPA LINE	MARKET	SIDE GAP	EPA TOTAL	MARKET	TOTAL GAP

EPA ratings, all 32 teams

Net is offense minus defense, in adjusted EPA per play. The shift columns show how many spots a unit moves once schedule and garbage time are accounted for. The flags list results likely to even out. Select a column heading to sort.

How the numbers are built

1. Take every pass and run play this season from nflverse play-by-play, which carries EPA and success for each play.
2. Drop garbage time (offense win chance under 10% or over 90%), kneels and spikes.
3. Fit one regression across all plays so each team gets an offense rating and a defense rating, with opponent strength and home field separated out. Pass and run get their own fits.
4. Project each game: each offense's rating plus the other defense's, times expected plays, plus 1.5 points for home field.
5. Pull the projections well toward average, because a few weeks is a small sample and unregressed ratings miss badly.

Not included: quarterback injuries, weather, rest and travel, and last season's results.

Does it predict anything yet?

Each week from 3 to 8, ratings were built from earlier weeks only and used to project that week's 89 games. Average miss on the final margin, in points (lower is better):

TOTALS

The closing line still beats the ratings. For now they work best as context and as a way to flag games for a closer look, not as picks.
