Pace and tendency

Both teams combined: **128.6 plays per game** (league average 129.4)

Team	Plays / G	Seconds / play (neutral)	Pass rate over expected
CLE Cleveland Browns	**62.7** #21	**28.4** #4	**−0.1%** #15
PIT Pittsburgh Steelers	**65.9** #13	**29.6** #10	**+6.7%** #2

Neutral = one-score games, first three quarters. Pass rate over expected is early downs, from nflverse's play-by-play model. Rank 1 = most plays, fastest pace, most pass-heavy.

Longer bar, better rank. Ranks are out of 32. The edge goes to whichever side is better by at least one league standard deviation (so it counts how big the gap is, not just rank spots). Adj. rows are adjusted for the offenses and defenses each team has faced, as on the EPA page; the per-game rows are not, so a soft or hard schedule shows in them. Rush Yds / Att is yards per rush attempt, gained by the offense and allowed by the defense; INT compares interceptions thrown by the offense with interceptions made by the defense. EPA / play (expected points added) and Success % use every pass and run play from nflverse play-by-play; for a defense, lower is better. Red zone TD % is the share of drives that ran a play inside the 20 and ended in a touchdown. Explosive % counts passes of 20+ yards and runs of 10+ per play; Pass 20+ % and Rush 10+ % split it by play type. Sack and pressure rates are per dropback (pressures are Pro Football Reference's count); for an offense lower is better, for a defense higher.
