# EPA line vs. the market

The EPA line is what the ratings alone say about each game. A big gap is not a bet: more often the market knows something the ratings can't see, such as a quarterback injury or the weather. Treat it as a game to look into.

| GAME | DAY | EPA LINE | MARKET | SIDE GAP | EPA TOTAL | MARKET | TOTAL GAP |
|---|---|---|---|---|---|---|---|
| SEA at DEN | Fri | DEN –1.5 | SEA –2.5 | 4.0 DEN | 42.0 | 40.5 | 1.3 Over |

# EPA ratings, all 32 teams

Net is offense minus defense, in adjusted EPA per play. The shift columns show how many spots a unit moves once schedule and garbage time are accounted for. The flags list results likely to even out. Select a column heading to sort.

| # ↑ | TEAM | | RECORD | NET | OFFENSE | DEFENSE | PASS OFF. | RUSH OFF. | OFF. SHIFT | DEF. SHIFT | REGRESSION FLAGS |

# How the numbers are built

1. Take every pass and run play this season from nflverse play-by-play, which carries EPA and success for each play.
2. Drop garbage time (offense win chance under 10% or over 90%), kneels and spikes.
3. Fit one regression across all plays so each team gets an offense rating and a defense rating, with opponent strength and home field separated out. Pass and run get their own fits.
4. Project each game: each offense's rating plus the other defense's, times expected plays, plus 1.5 points for home field.
5. Pull the projections well toward average, because a few weeks is a small sample and unregressed ratings miss badly.

Not included: quarterback injuries, weather, rest and travel, and last season's results.

## Does it predict anything yet?

Each week from 3 to 5, ratings were built from earlier weeks only and used to project that week's 47 games. Average miss on the final margin, in points (lower is better):

TOTALS

The closing line still beats the ratings. For now they work best as context and as a way to flag games for a closer look, not as picks.
